

Application Center

Individual system solutions

With its innovative special sewing machines, sewing automates and sewing units the Dürkopp Adler AG counts among the trendsetters in the field of sewing technology worldwide. The range of services offered also includes customer-specific applications and special solutions which are realized in a specially for this purpose established Application Center.

Displacement-free inserting of zippers

Displacement-free inserting of zippers

**Field of application**

Automotive, car interiors

Branch/Customer

Renowned European manufacturer of car interiors for the automotive industry

Problem

When inserting zippers in difficult-to-feed materials puckered seam edges occurred. The seams curled up and were not flat.

Solution

A specially designed zipper guide makes it possible to guide the zipper with a controlled pretension. The sewing equipment particularly adapted to this task guarantees displacement-free sewing, even when processing difficult-to-feed materials.

Additional components like laser line and downholder allow a defined and neat seam beginning. The special control concept ensures a consistently high quality and shorter cycle times.

Special advantages

- Displacement-free insertion of zippers – even in difficult-to-feed materials
- Consistently high quality of the sewing result
- Shorter cycle times

The consultants of the Dürkopp Adler Application Center will be pleased to inform you about the possibilities to realize your special application and to be at your disposal for individual advice.
