

Application Center

Individual system solutions

With its innovative special sewing machines, sewing automates and sewing units the Dürkopp Adler AG counts among the trendsetters in the field of sewing technology worldwide. The range of services offered also includes customer-specific applications and special solutions which are realized in a specially for this purpose established Application Center.

Quick clamp changing system of class 910

Quick clamp changing system of class 910

**Field of application**

Automotive, technical textiles

Branch/Customer

Leading European manufacturer of car interiors for the automotive industry

Problem

When using several clamp sets on CNC-controlled pattern stitchers it may happen that clamp sets are destroyed due to a wrong coordination of the sewing program and the clamp set.

Solution

By means of a special query for the clamp coding via a bar code the clamp sets are linked with the seam program. Thus, a confusion when changing the clamps is impossible. The quick changing system is designed in such a way that the respective clamp sets can be removed or fitted without any tools.

After the clamp change the 910-210 recognizes automatically which seam program belongs to the clamp and calls this program up afterwards.

Special advantages

- Safe coordination of the seam programs and the different clamp sets
- Undisturbed work flow when changing clamps
- Shorter cycle times

The consultants of the Dürkopp Adler Application Center will be pleased to inform you about the possibilities to realize your special application and to be at your disposal for individual advice.
