

Application Center

Individual system solutions

With its innovative special sewing machines, sewing automates and sewing units the Dürkopp Adler AG counts among the trendsetters in the field of sewing technology worldwide. The range of services offered also includes customer-specific applications and special solutions which are realized in an Application Center specially established for this purpose.

*Sewing buttonholes in collars and cuffs –
efficient working method*

Sewing buttonholes in collars and cuffs – efficient working method

**Field of application**

Garment – Shirt / Blouse

Branch/Customer

Performance-oriented manufacturer of shirts and blouses

Problem

A solution was demanded to make the operation “Sewing buttonholes in cuffs” more efficient, i.e. to shorten the production times and to increase the output.

Solution

A workplace with two automatic lockstitch buttonholers class 540-100 has been designed to meet these special requirements.

Thus, the operator is able to realize two operations simultaneously and the output can nearly be doubled due to the fully overlapped working method. The rotatable machine heads on the table top can be positioned to suit the individual ergonomic requirements of the operator.

Special advantages

- Compared to the conventional working method with one machine the workplace makes it possible to nearly double the output
- The rotatable machine heads on the table top can be individually aligned which facilitates maintenance work or threading after a thread change
- Height-adjustable machine stand
- Quick and precise positioning of the workpiece due to universally adjustable guides

The consultants of the Dürkopp Adler Application Center will be pleased to inform you about the possibilities to realize your special application and to be at your disposal for individual advice.
