Attaching and pinking the crotch gusset – efficient working method

**Field of application**

Garment – Production of trousers

Branch/Customer

Renowned European manufacturer of trousers and men's jackets

Problem

Pinking of the seam edge when attaching the crotch gusset of men's trousers had been done manually by means of scissors so far. Now the customer searched for a mechanical solution.

Solution

By means of the specially designed sewing station the basis for an efficient attaching and pinking of crotch gussets of men's trousers has been established.

The seam edge is uniformly pinked during the sewing operation by means of a pinking knife driven by a separate motor. Thus, the desired effect of a smooth seam edge is achieved which underlines the quality of the trousers.

Special advantages

- Higher output by reduction of time cycles – no subsequent pinking required
- Uniformly pinked seam edges by special motor control

The consultants of the Dürkopp Adler Application Center will be pleased to inform you about the possibilities to realize your special application and to be at your disposal for individual advice.
