

Commander Pro

With **QONDAC ELECTRONICS** you can optimize your production directly at the machine. Thanks to our latest hardware solution, the **Commander Pro**, you can easily control maintenance tasks and production processes via touch screen.

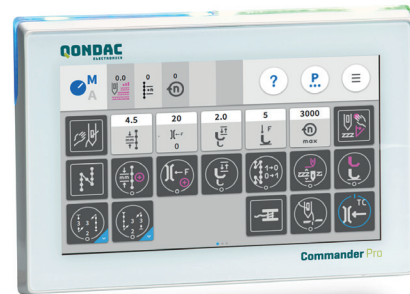

Commander Pro

With the Commander Pro you can easily add an intelligent touch screen to your machine.

The digital control unit displays minor defect messages directly on the machine and enables you to view and save operation plans with step-by-step instructions and tutorial videos.

In case of malfunctions, quickly call a technician with your fingertip and exchange important information. The Commander Pro also serves as a communication interface to your operator.

Advantages

- Low installation costs thanks to stand-alone solution
- Storage capacity, e.g. for tutorial videos and step-by-step instructions
- Defect messages on the screen, fault message by fingertip
- Easy integration into your network via a communication interface
